

Assignment 5**Form-Servlet Communication****Deadline: 04.02.2026**

5A) Design and develop a web-based Registration Form using HTML, CSS, and JavaScript that demonstrates Form–Servlet communication.

Requirements:

1. Create a registration form using HTML5 form controls with appropriate input fields.
2. Apply client-side validation using JavaScript (and/or HTML5 validation) to ensure that:
 - Mandatory fields are not left empty
 - Input values follow valid formats given in the specification

(Please use the registration form and validation you developed in the 3rd assignment)

3. On successful validation, submit the form data to a Java Servlet using the GET/POST method.
4. In the Servlet:
 - Read all submitted request parameters
 - Display the parameter names and their corresponding values dynamically.
5. Present the output in a tabular format.
6. Apply CSS styling to the table for better readability (borders, padding, colors, alignment).

=====

5B) Design and develop a web-based authentication application using HTML, CSS, and Java Servlets.

Requirements:

1. Create a Login Page using HTML form elements to accept username and password from the user.
2. Validate the input credentials on the server side using a Servlet.
3. If the authentication is successful:

- Redirect the user to a Success Page displaying a valid login message.
- 4. If the authentication fails:
 - Redirect the user to an Error Page displaying an appropriate error message.
 - Provide an option (link or button) on the error page to return to the Login Page and retry authentication.
- 5. Ensure proper navigation and control flow between login, success, and error pages.

Username Validation Rules

1. **Mandatory field**
 - Username must not be empty.
2. **Length constraint**
 - Minimum: **5 characters**
 - Maximum: **15 characters**
3. **Allowed characters**
 - Only **alphabets (A–Z, a–z)**
 - **Numbers (0–9)**
 - **Underscore (_)**
 - No spaces or special characters
4. **Starting character**
 - Must start with a **letter**
5. **Case sensitivity**
 - Username is **case-insensitive** (or specify as case-sensitive, if required)
6. **Uniqueness**
 - Username must be unique (checked against predefined stored values in your code)

Password Validation Rules

1. **Mandatory field**
 - Password must not be empty.
2. **Length constraint**
 - Minimum: **8 characters**

- Maximum: **20 characters**

3. **Character requirements**

- At least **one uppercase letter** (A–Z)
- At least **one lowercase letter** (a–z)
- At least **one digit** (0–9)
- At least **one special character** (@ # \$ % & * !)

4. **Spaces**

- Spaces are not allowed

5. **Security**

- Password should not be the same as the username
